Content Application Technical Specialist – Atlanta

Description

Mid Java Programmer in Atlanta

- The job is a Junior/Senior role.
 - Demonstrated mastery of Java language and features. 7 years or more of development experience, mostly with Java.
 - Strong OOP fundamentals
 - You are expected to bring new ideas.
 - “Full Stack” skills are preferred, but we will consider strong back-end developers
 - HTML/CSS/Javascript
 - XML, JSON, YAML
 - SQL, database access with JDBC, skills with one or more of Postgresql, Oracle, SQL server databases
 - Awareness of, or experience with NoSQL databases a bonus
 - Autonomous self-starter
-
- You will not be closely supervised, but will be expected to perform at a high level and meet your commitments
 - Strong communications skills.
 - Ability to create new and edit existing technical (generally not user) documentation
 - Demonstrated ability to solve complex problems with software
 - Software Engineering skills
 - Architecture/design
 - Implementation
 - Testing / automated test
 - Other tooling: Git, Jenkins, Gradle, Gerrit are all strong pluses
 - Linux
