

Transform, package and deliver your enterprise content

DELIVER

Most organizations today have information stored in a variety of file formats. But content stored in a print stream or other data and binary formats isn't what you want to present to a customer.

For productivity and excellent customer experiences, it's critical to have options for formatting, packaging, and delivering content. Creating a customized PDF or spreadsheet from a large output or inventory report is an advanced solution to your content delivery challenges.

Content Cloud is an enterprise content services platform that allows you to take any type of stored content, dynamically segment it with multi-level indexing, and package, and deliver it into a user-friendly format. Content Cloud can seamlessly transform, package, and deliver your content in the best way for your business.

Content Cloud's advanced indexing capability enables you to find and extract only the information pertinent to your task, package it with any other relevant content or documents, and deliver it using the delivery channel of your choice. Content Cloud's indexing also serves to dynamically segment large output streams and files into separate documents for distribution without physically altering the original or saving redundant copies of the same content.

Distribute content with increased security through established delivery channels

Data security is a challenge that requires a multifaceted approach. Content Cloud secures your information from several angles. TLS 1.2 encryption capabilities limit access to content and safeguard it in delivery. Secured links to access content in Content Cloud can be created and delivered to allow access only to authorized users.

Content Cloud supports and enables multiple distribution channels. Integrate with the existing delivery channels in your organization or define new ones. Content Cloud allows you to connect and deliver information securely regardless of where your content is stored - the network, mainframe, cloud, or 3rd party repositories.

Key Benefits

- Extraction capabilities provide only relevant content, down to the line level
- Transform and package content from its native format to one your users prefer
- Secure content distribution and delivery

Points of differentiation/ Key Features

- Extract and deliver only relevant content from large files and reports
- Replace Monarch and Datawatch reporting for extraction
- Include notes and comments to any document in any format to enhance search, packaging, and delivery capabilities

Content Cloud is an enterprise content services platform that enables you to manage all of the various forms of content across your entire organization - from large output data streams to single desktop files. Customer statements and correspondence, financial records, invoices, million-page reports - any business document you have - can be accessed with Content Cloud through a single interface quickly and reliably, regardless of location. The Systemware difference is how we capture and categorize content using our advanced indexing capabilities.
