

# How to Manage and Transform Your Enterprise Content

FIND

## Locate content across multiple files, legacy systems, and third-party products with speed

Building an organization that delivers innovation, solves problems, and creates loyalty requires consistent, effective communication. Access to immediate, secure information is vital to forging bonds and alliances with customers and employees. How fast your teams find data within your organization radically affects performance. Save your users hundreds of hours searching through documents and folders with an industry-leading indexing capability for fast content retrieval - and increased user productivity.

Content Cloud is an enterprise content services platform that enables an authorized user to find a piece of information buried in your content ecosystem. Whether your enterprise content is stored in multiple systems or buried in archives across your ecosystem, Content Cloud cuts the search time for documents, facts, and figures.

## Deliver anywhere, anytime access to your content

Most organizations use multiple enterprise content software solutions and have data stored in a variety of places and systems; this complicates and hinders locating information. Content Cloud accelerates how fast you can find data with an indexing capability that provides granularity and accuracy - features unavailable with document-level metadata search from other software providers.

## Retrieve and access relevant content to authorized users with dynamic data-masking

Relevance and permission are necessary elements for information governance. Your enterprise content services platform must support access controls to protect data - and without affecting user productivity. Content Cloud filters content based on permissions for specific roles and responsibilities; this allows users to access relevant content to the individual. Dynamic data-masking permits only those with authorization to view sensitive data or specific lines and pages - even from a million-page report. And with dynamically segmenting a single document or report, you save on storage costs because you retain only one version or instance of the file.

### Key Benefits

- Eliminate time spent searching for information
- Locate the exact content you need fast in minutes, not hours
- Transform a document into the desired format with advanced extraction capabilities

### Points of differentiation/ Key Features

- Enhanced indexing accelerates the speed to find content across multiple documents, folders, and platforms
- Search indexes across multiple systems with Federated search
- Dynamic data-masking protects sensitive data

**Kroger reduced time spent on end-of-year payroll processing from 112 hours to 3 with a script that enabled them to find, retrieve, and reconcile payroll data quickly.**

**"We've accomplished more this year than the past eleven years combined. We are doing work rather than pulling reports."**

~KASH Team at Kroger

Content Cloud is an enterprise content services platform that enables you to manage all of the various forms of content across your entire organization - from large output data streams to single desktop files. Customer statements and correspondence, financial records, invoices, million-page reports - any business document you have - can be accessed with Content Cloud through a single interface quickly and reliably, regardless of location. The Systemware difference is how we capture and categorize content using our advanced indexing capabilities.
