

Modernization of Legacy ECM

The High Cost of Doing Nothing

Antiquated systems are not only costly and lack operational efficiency, they put your organization at risk. While it may seem easier and more cost efficient to stay put, the opportunity to gain scalability, an improved UX, and adherence to changing compliance requirements far outweighs the cost of doing nothing at all.

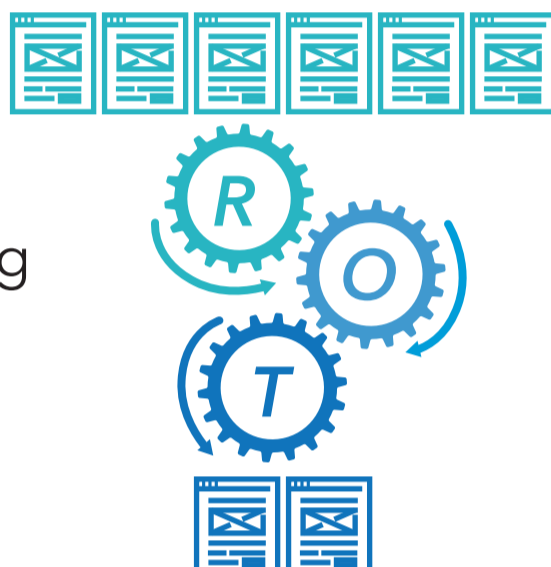

Enterprises spend anywhere from **60% to 85%** on IT budgets to maintain their infrastructures.

HOW MUCH IS LEGACY ECM HOLDING BACK YOUR BUSINESS OBJECTIVES?

If you can't find the content you need quickly, you are wasting time, money and productivity. Content repositories are bursting with today's information overload, much of which is redundant, obsolete, and trivial content (ROT). Laborious searching and sifting to find, manage, and transform content can impede critical business processes.

Up to **85%** of information is redundant, obsolete or trivial and is costing **3.3 Trillion** dollars annually

HOW MUCH CAN YOUR ORGANIZATION SAVE BY MITIGATING ROT CONTENT?

Migrating your content shouldn't be the barrier to having a modern content services platform. Mitigation of ROT content during migration can have huge cost benefits without costing time. By leveraging an ad-hoc approach to content migration that only migrates content that you need, leaving behind ROT, you can implement a new content services platform this year. A platform that can scale to meet your changing organizational needs and have resounding effects on business outcomes for decades.

With IT spend to rise to over **1 Trillion** in 2020, organizations can expect IT revenues to be between **3.5% & 7%**

WHAT IF YOU COULD GET RID OF ROT AND MIGRATE TO A MODERN CONTENT SERVICES PLATFORM? AND DO IT IN WEEKS NOT YEARS?

Legacy ECM solutions often come with legacy infrastructure. Older systems can be expensive to provision and maintain as well as potentially insecure and non-compliant with new information governance regulations. Modern platforms allow organizations to reap the benefits of a fully-hosted or hybrid offering. These cloud services can reduce hardware and IT expenses, yet still allow in-house management while satisfying any cloud-first initiative.

40% of organizations are actively trying to move content to cloud based services.

IS YOUR ORGANIZATION TAKING FULL ADVANTAGE OF A FLEXIBLE CONTENT SERVICES PLATFORM?

Systemware Content Cloud can not only save you money we can modernize while we're at it. Learn more about "The Five Warning Signs it's Time to Ditch Your Legacy Document Management System" and [download today](#).
